|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description  | <p>3M Cold Shrink QT-III Silicone Rubber Indoor Tubular Termination Kits, 7620-T and 7690-T Series, contain one-piece, non-skirted, silicone rubber terminations, qualified as IEEE Standard 48 Class 1 for indoor and weather-protected applications. The termination assemblies consist of a tubular insulator, high dielectric constant (High-K) stress control tube*, conformable High-K stress controlling compound and built-in environmental top sealing compound. The insulator is made of dark gray silicone rubber with advanced tracking resistance and hydrophobic properties.</p> <p>*The 7620-T termination is designed and assembled with stress controlling compound only.</p> <p>The complete assembly is pre-stretched and loaded onto a removable core. The disposable core can be recycled. The kits are designed for terminating solid dielectric shielded power cable rated 5 through 35 kV, with Tape Shield, Wire Shield and UniShield® constructions.</p> |
| Kit Contents | <p>Each kit contains sufficient quantities of the following materials to make three single-phase terminations (lugs are not included in kit).</p> <ul style="list-style-type: none"><li>• 3 High-K, Tracking Resistant, Silicone Rubber Indoor Tubular Terminations</li><li>• 3 Pre-formed Ground Braids</li><li>• 3 Constant Force Springs</li><li>• 6 Strips Scotch® Mastic Strip 2230 (black with white release liners, bagged)</li><li>• 1 3M Cable Cleaning Preparation Kit CC-2</li><li>• 3 3M EMI Copper Foil Shielding Tape 1181 Strips, 1/2" x 10"</li><li>• 1 Instruction sheet</li></ul>                                                                                                                                                                                                                                                                                                                                                                                |

# 3M™ Cold Shrink QT-III Silicone Rubber Indoor Tubular Termination Kits, 7620-T and 7690-T Series

## Features

- Conforms to IEEE Standard 48, Class 1 requirements for 5, 8, 15, 25/28 and 35 kV terminations
- One-piece versatile design, allowing quick installation and accommodating a wide range of cable sizes
- Cold shrink delivery system allows easy installation: Simply place termination over prepared cable and unwind core to shrink into place (no force fit required)
- High-K stress control: Specially formulated high-dielectric constant material minimizes surface stress by more uniformly distributing the electrical field over the entire surface of the insulator
- Compact design provides for easier installation in restricted spaces
- Silicone rubber insulators, EPDM stress control tubes, stress controlling compound and environmental sealing compound are compatible with common solid dielectric insulations, such as polyethylene (PE), cross-linked polyethylene (XLPE) and ethylene propylene rubber (EPR).

## Stress Control

The 3M Cold Shrink QT-III Silicone Rubber Indoor Tubular Termination Kits, 7620-T and 7690-T Series, control the electric field stress distribution with special High-K materials, which are an integral part of the termination. The High-K materials, with a dielectric constant (K) of greater than 15, capacitively distribute the field that surrounds the termination.

The stress concentrations in a continuous length of shielded cable are typically 50 V/mil adjacent to the shield to about 70 V/mil at the conductor. The 3M Cold Shrink QT-III Silicone Rubber Termination reduces the cable stresses at the termination to less than those in the continuous shielded portion of the cable.

Electrical flux is refracted to distribute the voltage stress in a controlled manner along the entire termination length extending beyond the cable shield cutoff. By controlling the electric field, the stress concentrations on the termination insulator surface are kept below 15 V/mil at rated voltage. This stress distribution permits high-power frequency performance and impulse performance with a compact termination design.

*Figure 1* illustrates an actual computerized stress plot of the 3M Cold Shrink QT-III Silicone Rubber Termination.

|                              |                                                                                                                                                                                                                                                                                                           |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Environmental Classification | Indoor terminations, such as 3M Cold Shrink QT-III Silicone Rubber Indoor Tubular Termination Kits, 7620-T and 7690-T Series, can be specified for most outdoor, pad-mounted switchgear and transformer applications, since these enclosure interiors are protected from direct exposure to the elements. |

---

## Typical Properties

Not for specifications. Values are typical, not to be considered minimum or maximum. Properties measured at room temperature 73°F (23°C) unless otherwise stated.

3M Cold Shrink QT-III Silicone Rubber Indoor Tubular Termination Kits, 7620-T and 7690-T Series, can be used on cables with a rated maximum operating temperature of 221°F (105°C) and emergency overload rating of 284°F (140°C).

Terminations constructed from these kits meet the requirements of IEEE 48, “IEEE Standard Test Procedures and Requirements for High Voltage Alternating-Current Cables Terminations” and are designated Class 1 for indoor or weather-protected locations. The current rating of these terminations meets or exceeds the current rating of the cables on which they are installed.

## 3M™ Cold Shrink QT-III Silicone Rubber Indoor Tubular Termination Kits, 7620-T and 7690-T Series

|                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Specifications                    | <p>The 3M Cold Shrink QT-III Silicone Rubber Indoor Tubular Termination Kits, 7620-T and 7690-T Series, must have a voltage class rating equal to or greater than the cable being terminated. The rating shall be 5, 8, 15, 25/28 or 35 kV as an IEEE Standard 48 Class 1 termination. It must have a maximum continuous operating temperature rating of 221°F (105°C), with an emergency overload rating of 284°F (140°C). The termination stress control shall be capacitive and constructed of a High-K stress control compound and a High-K EPDM rubber tube. The installation procedure shall not require using silicone grease.</p> <p>The termination insulator shall be of a non-skirted tubular design, constructed of tracking resistant silicone rubber, dark gray in color. The termination must be of a pre-stretched cold shrink design, installed without the application of a heat source. The termination kit shall include a one-piece, non-skirted, silicone rubber termination with solderless mechanical ground assembly, and shall accommodate Tape (ribbon), Wire, or UniShield® Shielded cables. The Class 1 termination kits shall be used with listed copper or aluminum compression lugs or Shearbolt lugs.</p> |
| Engineering/ Architectural Specifications | <p>Terminating of all 5, 8, 15, 25/28 and 35 kV shielded power cables, indoors and in weather-protected equipment, shall be performed in accordance with instructions included in the 3M Cold Shrink QT-III Silicone Rubber Termination Kits, 7620-T and 7690-T Series. This shall include all weather-protected areas for Tape Shield, Wire Shield and UniShield® cables. The termination kits shall be used in conjunction with 3M Scotchlok™ Copper Compression Lugs 30000 and 31000 Series, 3M Scotchlok™ Copper/Aluminum Compression Lugs 40000 Series, 3M Stem Connectors SC Series or 3M Mechanical Shearbolt Lugs QL2 Series: Two-Hole</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

# 3M™ Cold Shrink QT-III Silicone Rubber Indoor Tubular Termination Kits, 7620-T and 7690-T Series

## Performance Tests

### Typical Results, IEEE Standard 48 Short-Term Test Sequence

| Insulation Class Test                        | 5 kV          |         | 8 kV          |         | 15 kV         |         | 25/28 kV      |         | 35 kV         |         |
|----------------------------------------------|---------------|---------|---------------|---------|---------------|---------|---------------|---------|---------------|---------|
|                                              | Require-ments | Results | Require-ments | Results | Require-ments | Results | Require-ments | Results | Require-ments | Results |
| Partial Discharge Extinction voltage @ 3 pC  | 4.5 kV        | Passed  | 7.5 kV        | Passed  | 13 kV         | Passed  | 21.5 kV       | Passed  | 30 kV         | Passed  |
| Power Frequency Voltage 1 min. Dry Withstand | 25 kV         | Passed  | 35 kV         | Passed  | 50 kV         | Passed  | 65 kV         | Passed  | 90 kV         | Passed  |
| Power Frequency Voltage 6 hr. Dry Withstand  | 15 kV         | Passed  | 25 kV         | Passed  | 36 kV         | Passed  | 55 kV         | Passed  | 75 kV         | Passed  |
| Direct Voltage 15 min. Dry Withstand         | 50 kV         | Passed  | 65 kV         | Passed  | 75 kV         | Passed  | 105 kV        | Passed  | 140 kV        | Passed  |
| Lightning Impulse Voltage Withstand (BIL)    | 75 kV         | Passed  | 95 kV         | Passed  | 110 kV        | Passed  | 150 kV        | Passed  | 150 kV        | Passed  |
| Partial Discharge Extinction Voltage @ 3 pC  | 4.5 kV        | Passed  | 7.5 kV        | Passed  | 13 kV         | Passed  | 21.5 kV       | Passed  | 30 kV         | Passed  |

### Typical Results, IEEE Standard 48 Long-Term Test Sequence

| Insulation Class Test                                                       | 5 kV          |         | 8 kV          |         | 15 kV         |         | 25/28 kV      |         | 35 kV         |         |

### Partial Discharge (Corona Tests)

The purpose of corona testing is to determine whether all properly installed terminations operate corona-free at a minimum of 150% of their operating voltage. For this test, the applied test voltage is gradually increased until high frequency discharges appear on the test set's oscilloscope display. The voltage at which these discharges reach a magnitude of 3 pico-coulombs is recorded as the corona starting voltage (CSV). The applied voltage is then lowered until the discharge level drops below 3 pC, and this is recorded as the corona extinction voltage (CEV).

# 3M™ Cold Shrink QT-III Silicone Rubber Indoor Tubular Termination Kits, 7620-T and 7690-T Series

---

## Performance Tests, *continued*

### Power Frequency (AC) Withstand Tests

All 3M Cold Shrink QT-III Silicone Rubber Indoor Tubular Termination Kits, 7620-T and 7690-T Series, meet the IEEE Standard 48 requirements for a Class 1 termination. As the terminations are specified for indoor (weather-protected) applications, the 60 Hz ten-second wet withstand test does not apply.

### Lightning Impulse Tests

For these tests, a 1.2 x 50 microsecond voltage wave is applied to the termination's lug. The testing consists of both positive and negative polarity surges per IEEE Standard 48 BIL requirements. The 3M Cold Shrink QT-III Silicone Rubber Termination Kits, 7620-T and 7690-T Series, exceed these BIL requirements.

### Sealing Tests

Termination top and bottom seals are tested per IEEE Standard 48 requirements. The termination is submerged in water, current cycled 8 hours on and 16 hours off for 10 cycles. The termination is then removed and AC Withstand tested.

---

## Installation Techniques

### Caution

Working around energized high-voltage systems may cause serious injury or death. Installation should be performed by personnel familiar with good safety practice in handling electrical equipment. De-energize and ground all electrical systems before installing product.

Detailed instructions are included in each kit to provide the installer with all information required to properly install the appropriately sized 3M Cold Shrink QT-III Silicone Rubber Termination Kits, 7620-T and 7690-T Series terminations. A brief summary of the installation steps for Tape Shield cable is outlined as follows:

1. Prepare cable according to standard procedure.
2. Apply bottom mastic seal (*Figure 2*).

**Figure 2**

3. Install lug using a listed crimping tool and die.
4. Install termination onto cable and unwind core, allowing termination to shrink into place (*Figure 3*).

**Figure 3**
